

Deviations for XCO₂ using PCT parameter 0.02 <-> 0.005

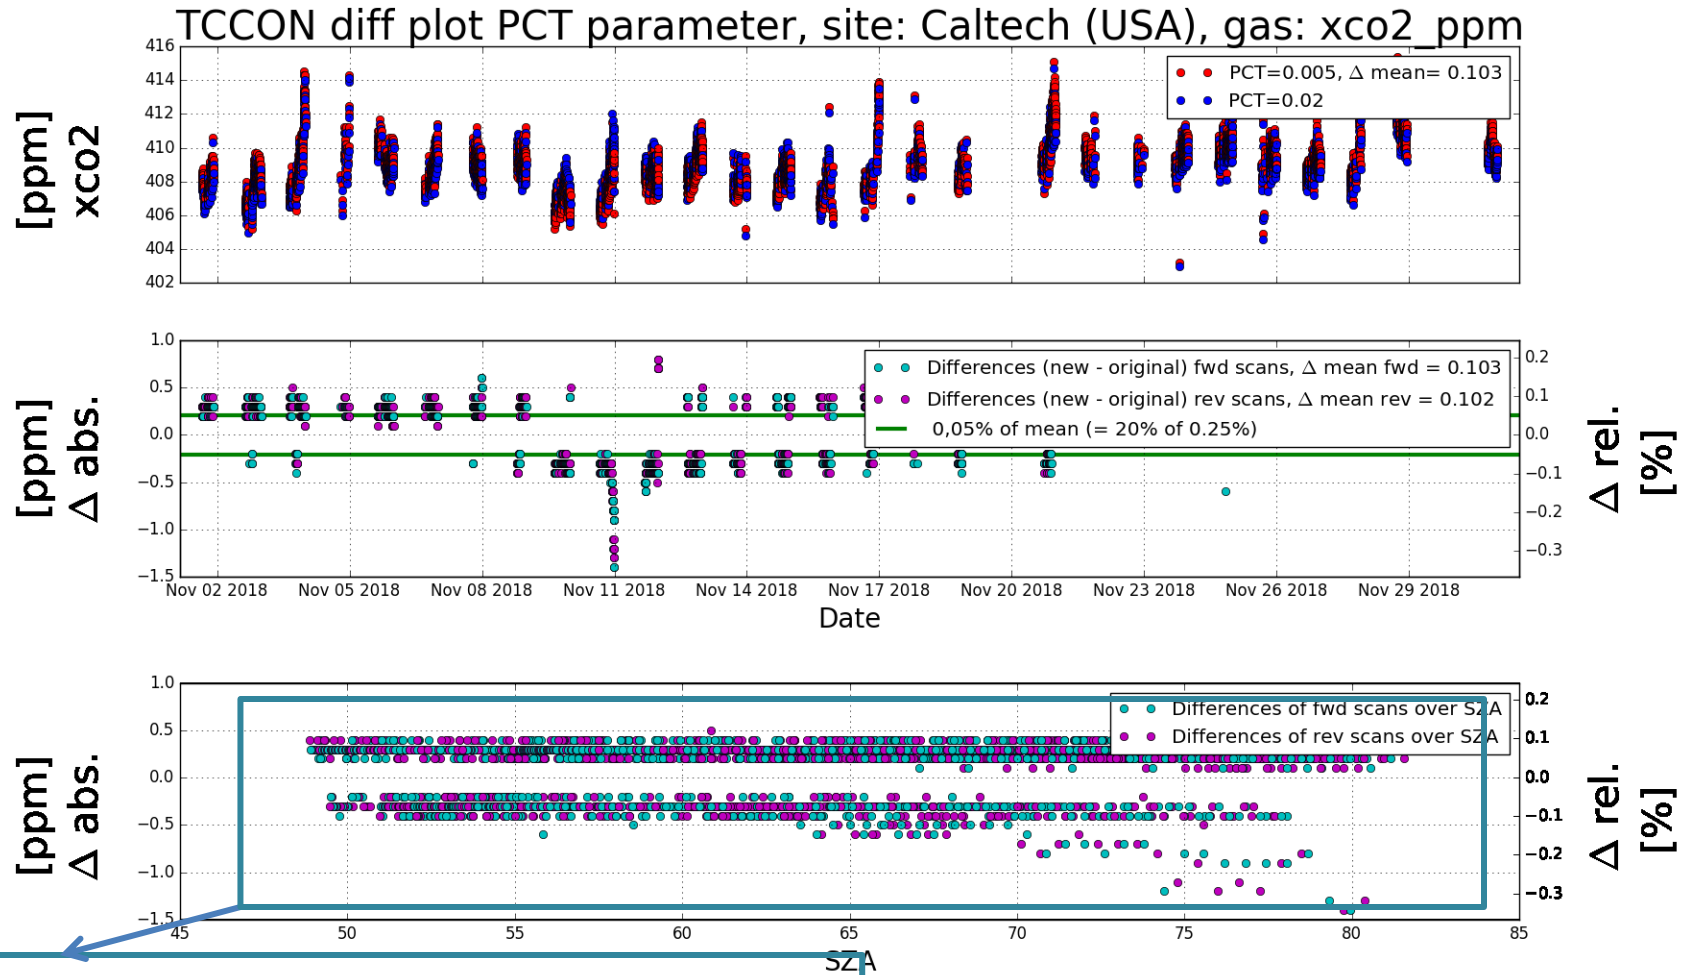

Bialystok PCT 0.02 \leftrightarrow 0.005

TCCON diff plot PCT parameter, site: Bialystok (Poland), gas: xco2_ppm

offset \sim 0.1 ppm and fwd-rev-split

Caltech PCT 0.02 \leftrightarrow 0.005

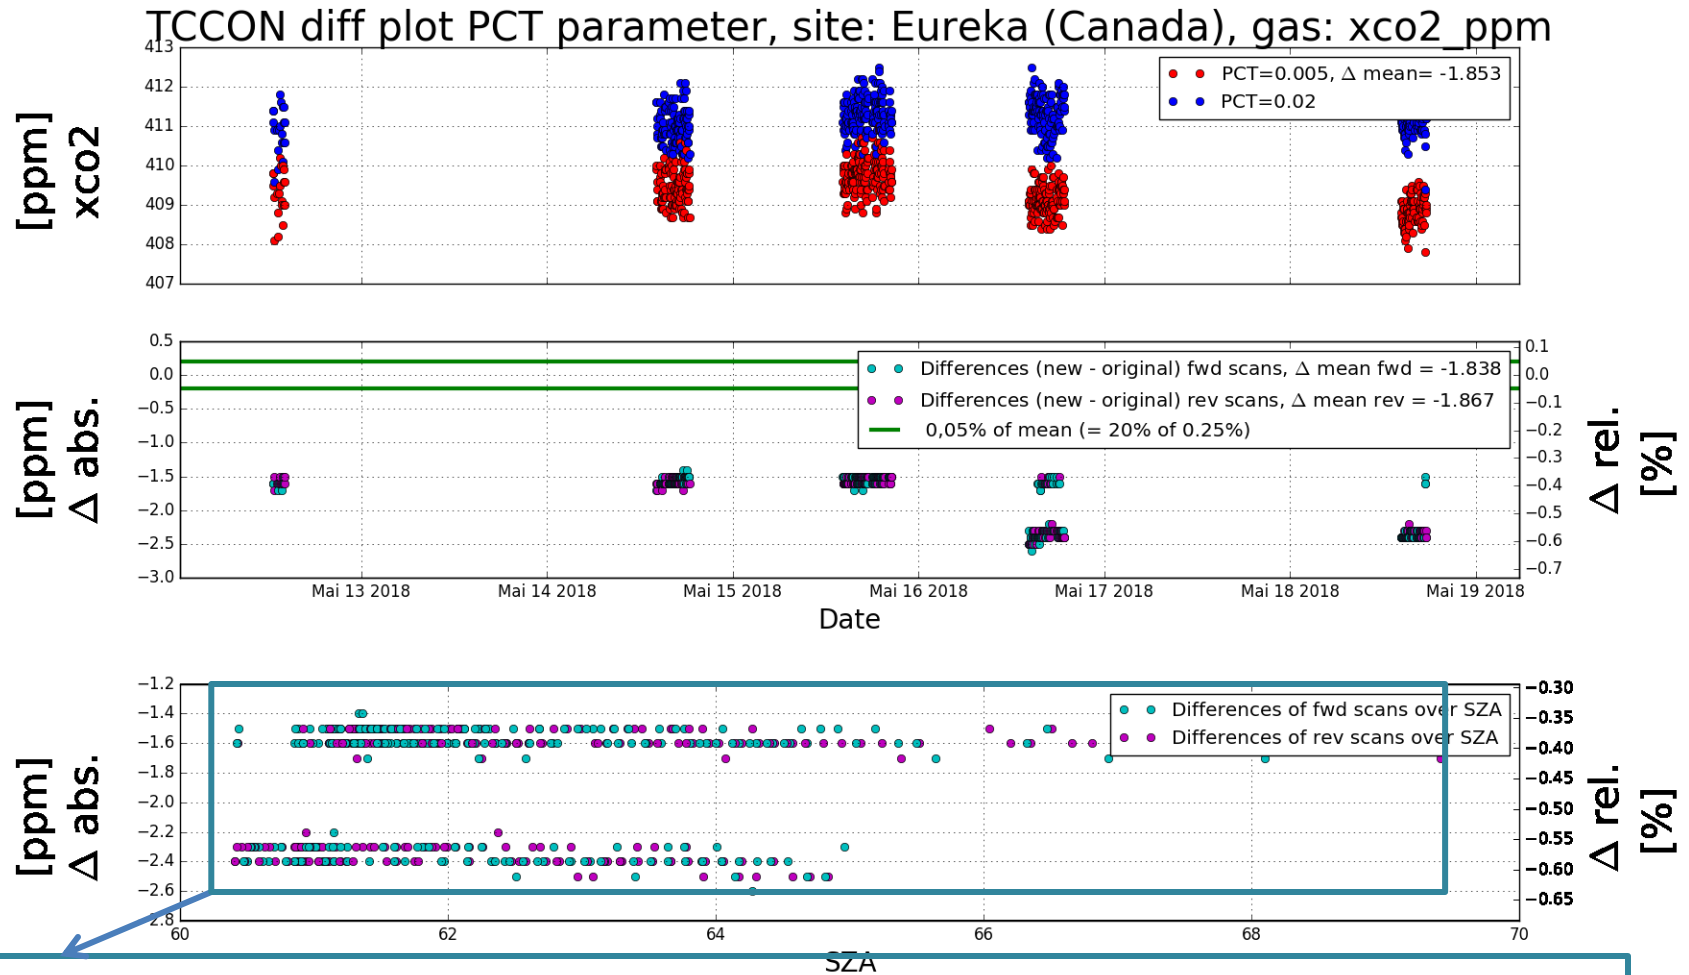

split, but not assigned to fwd-rev

Paris PCT 0.02 <-> 0.005

offset ~1.1 ppm and fwd-rev-split

Eureka PCT 0.02 \leftrightarrow 0.005

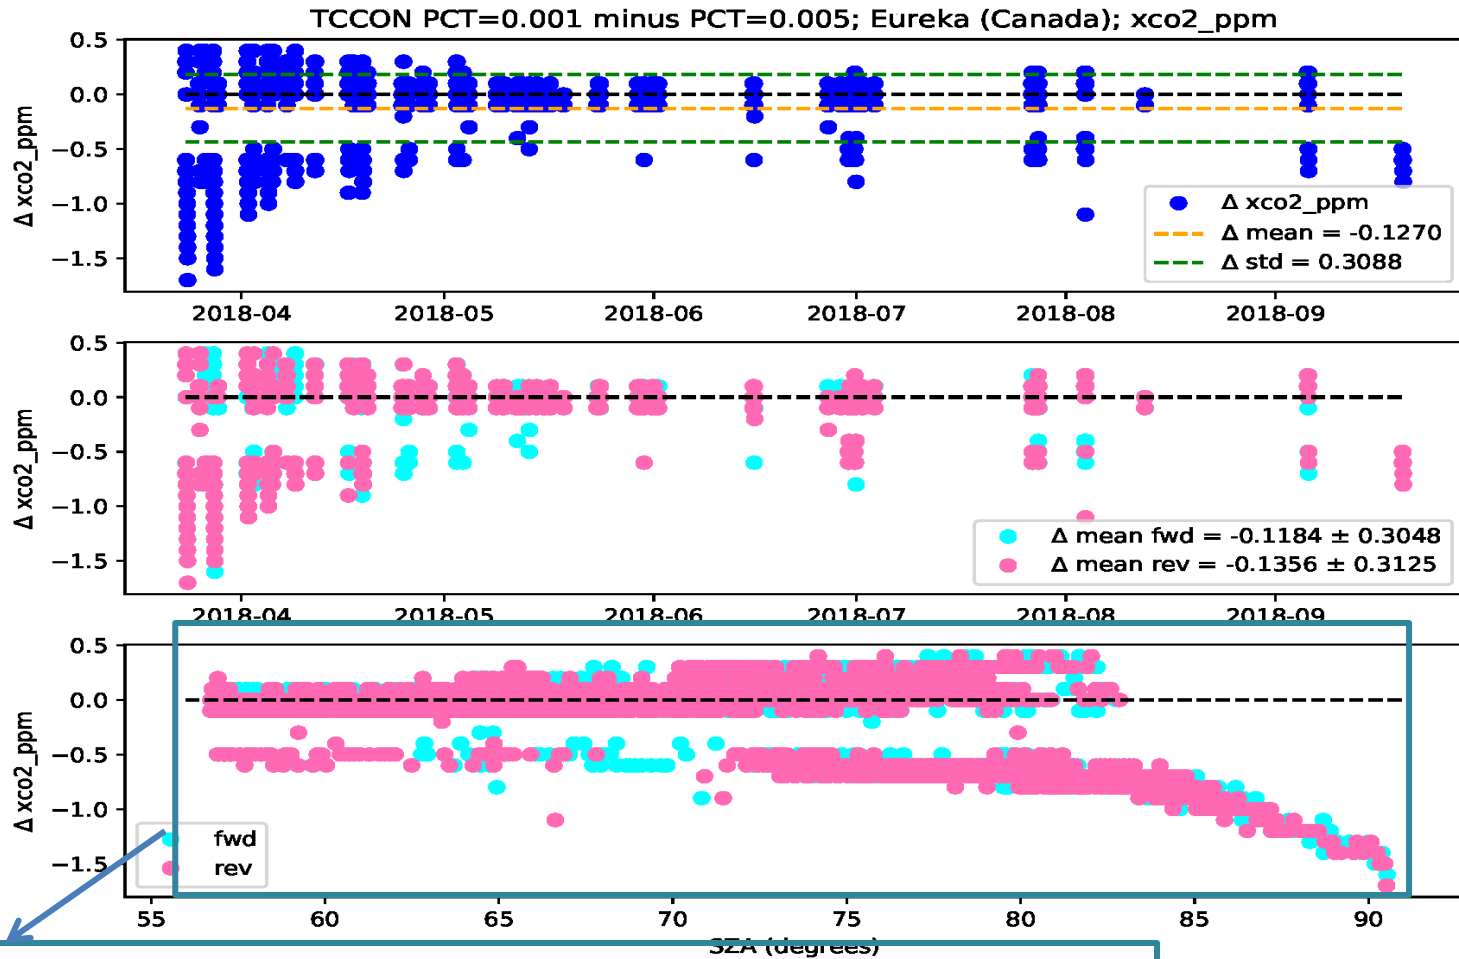

offset 1.8ppm, split not assigned to fwd-rev, SZA dependance

Park Falls PCT 0.005 \leftrightarrow 0.001

even PCT=0.005 is not enough

Eureka PCT 0.005 \leftrightarrow 0.001

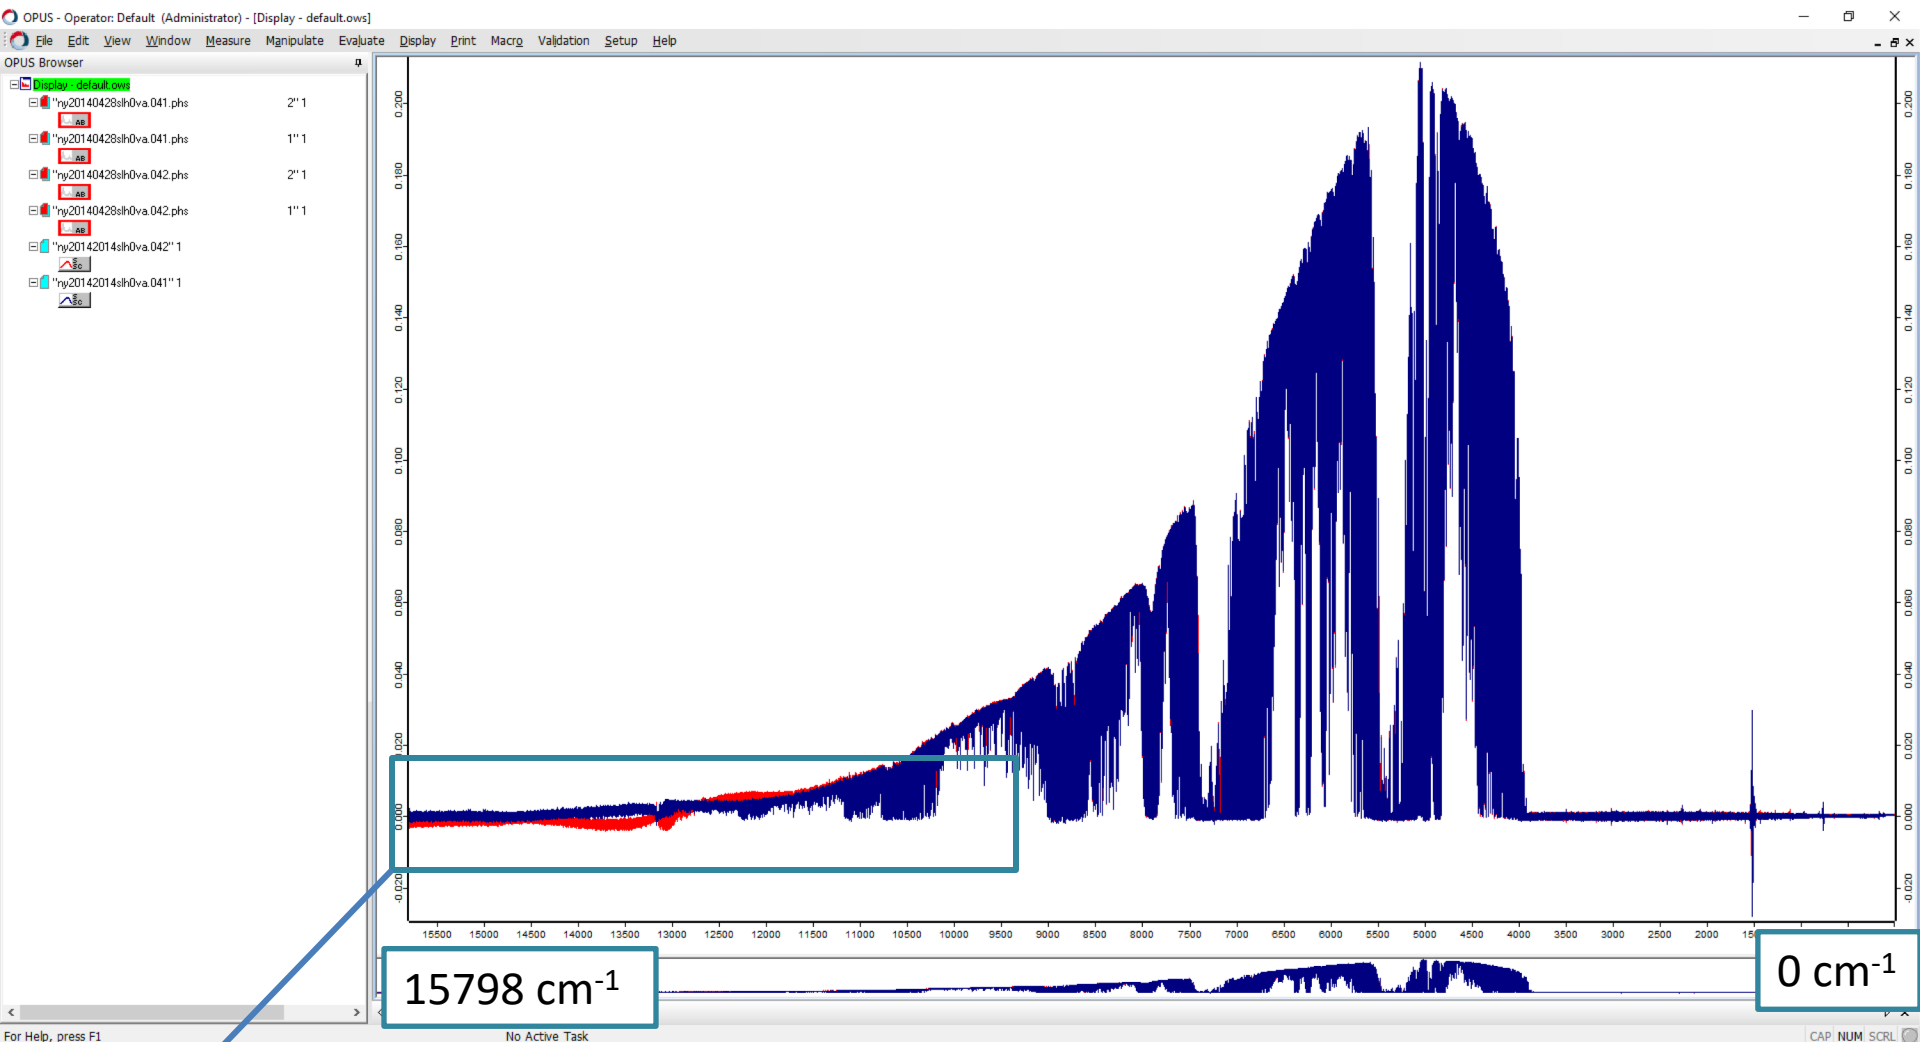

even PCT=0.005 is not enough

Ny Alesund Phase Interpolation (PCT=0.02)

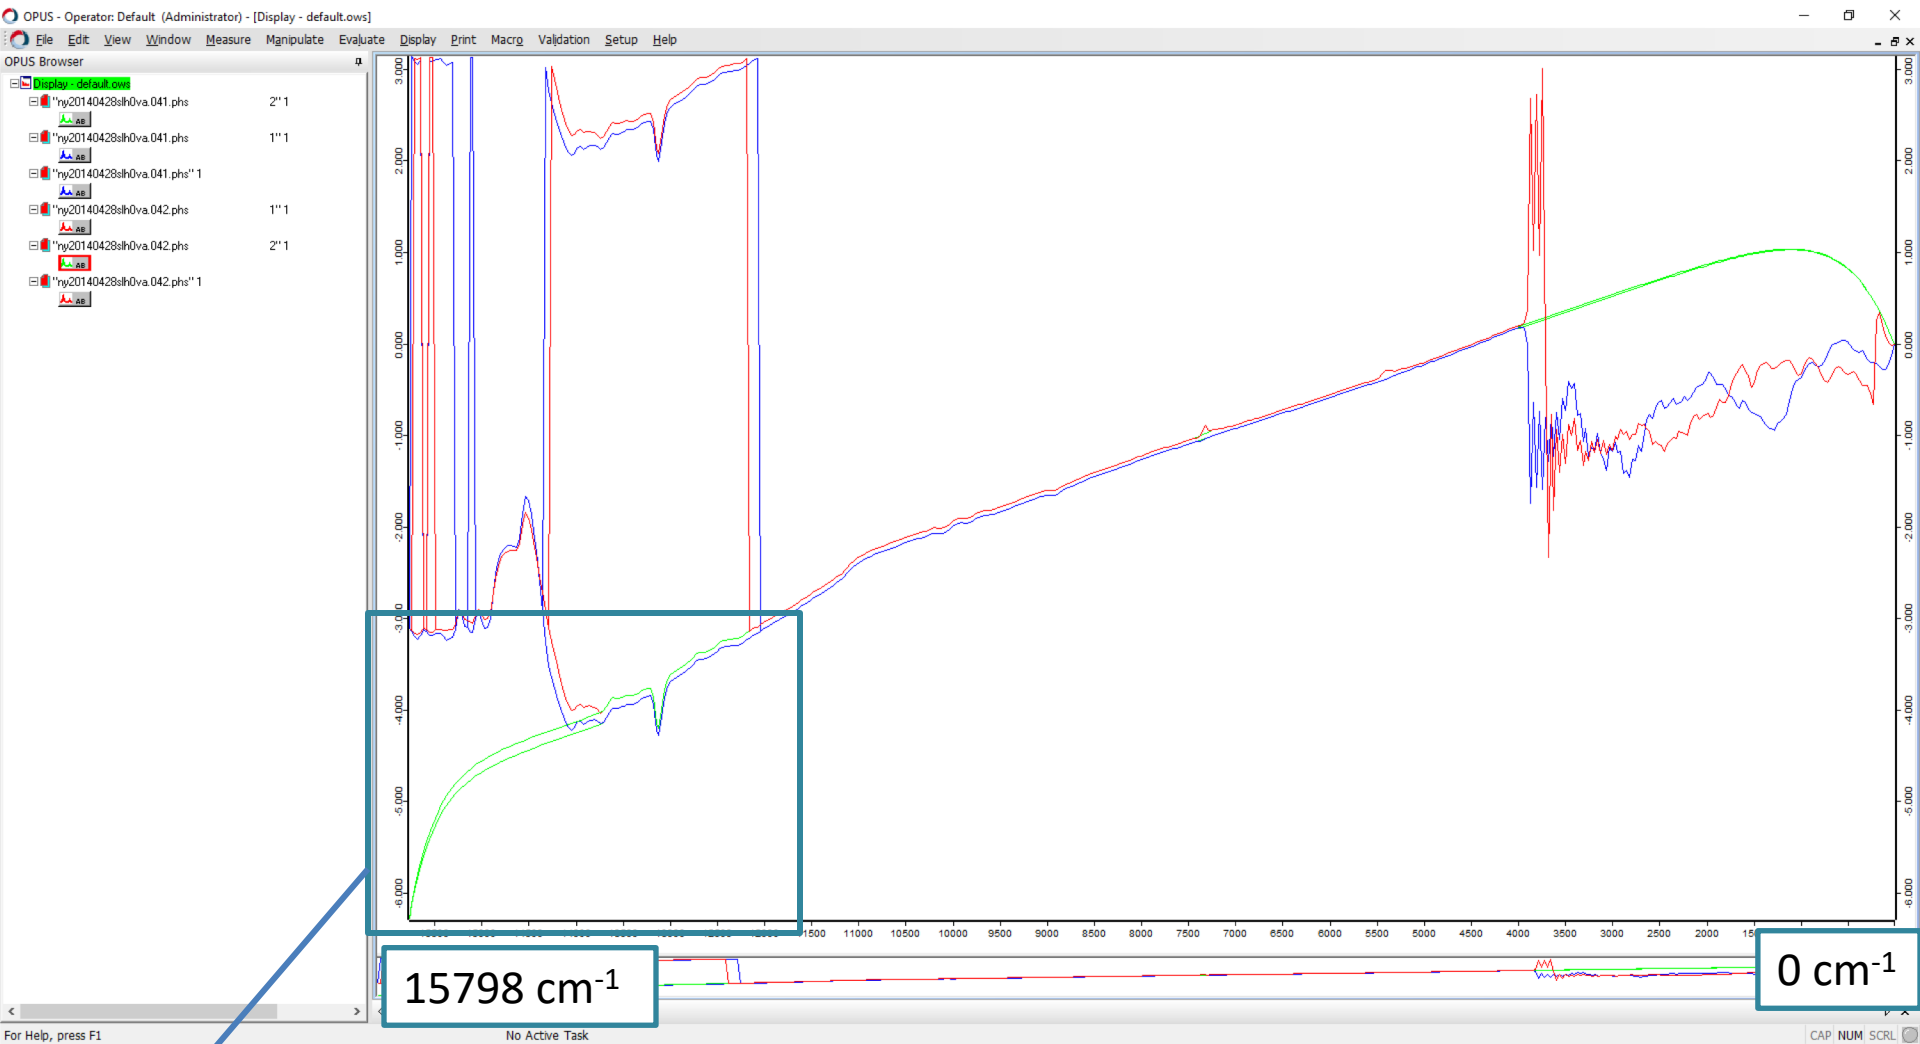

Interpolation from + / -pi -> discontinuity / fwd-rev split

Ny Alesund Phase Interpolation (PCT=0.02)

Discontinuity lead to strange intensities, effect on other wavenumbers

Ny Alesund Phase Interpolation tests

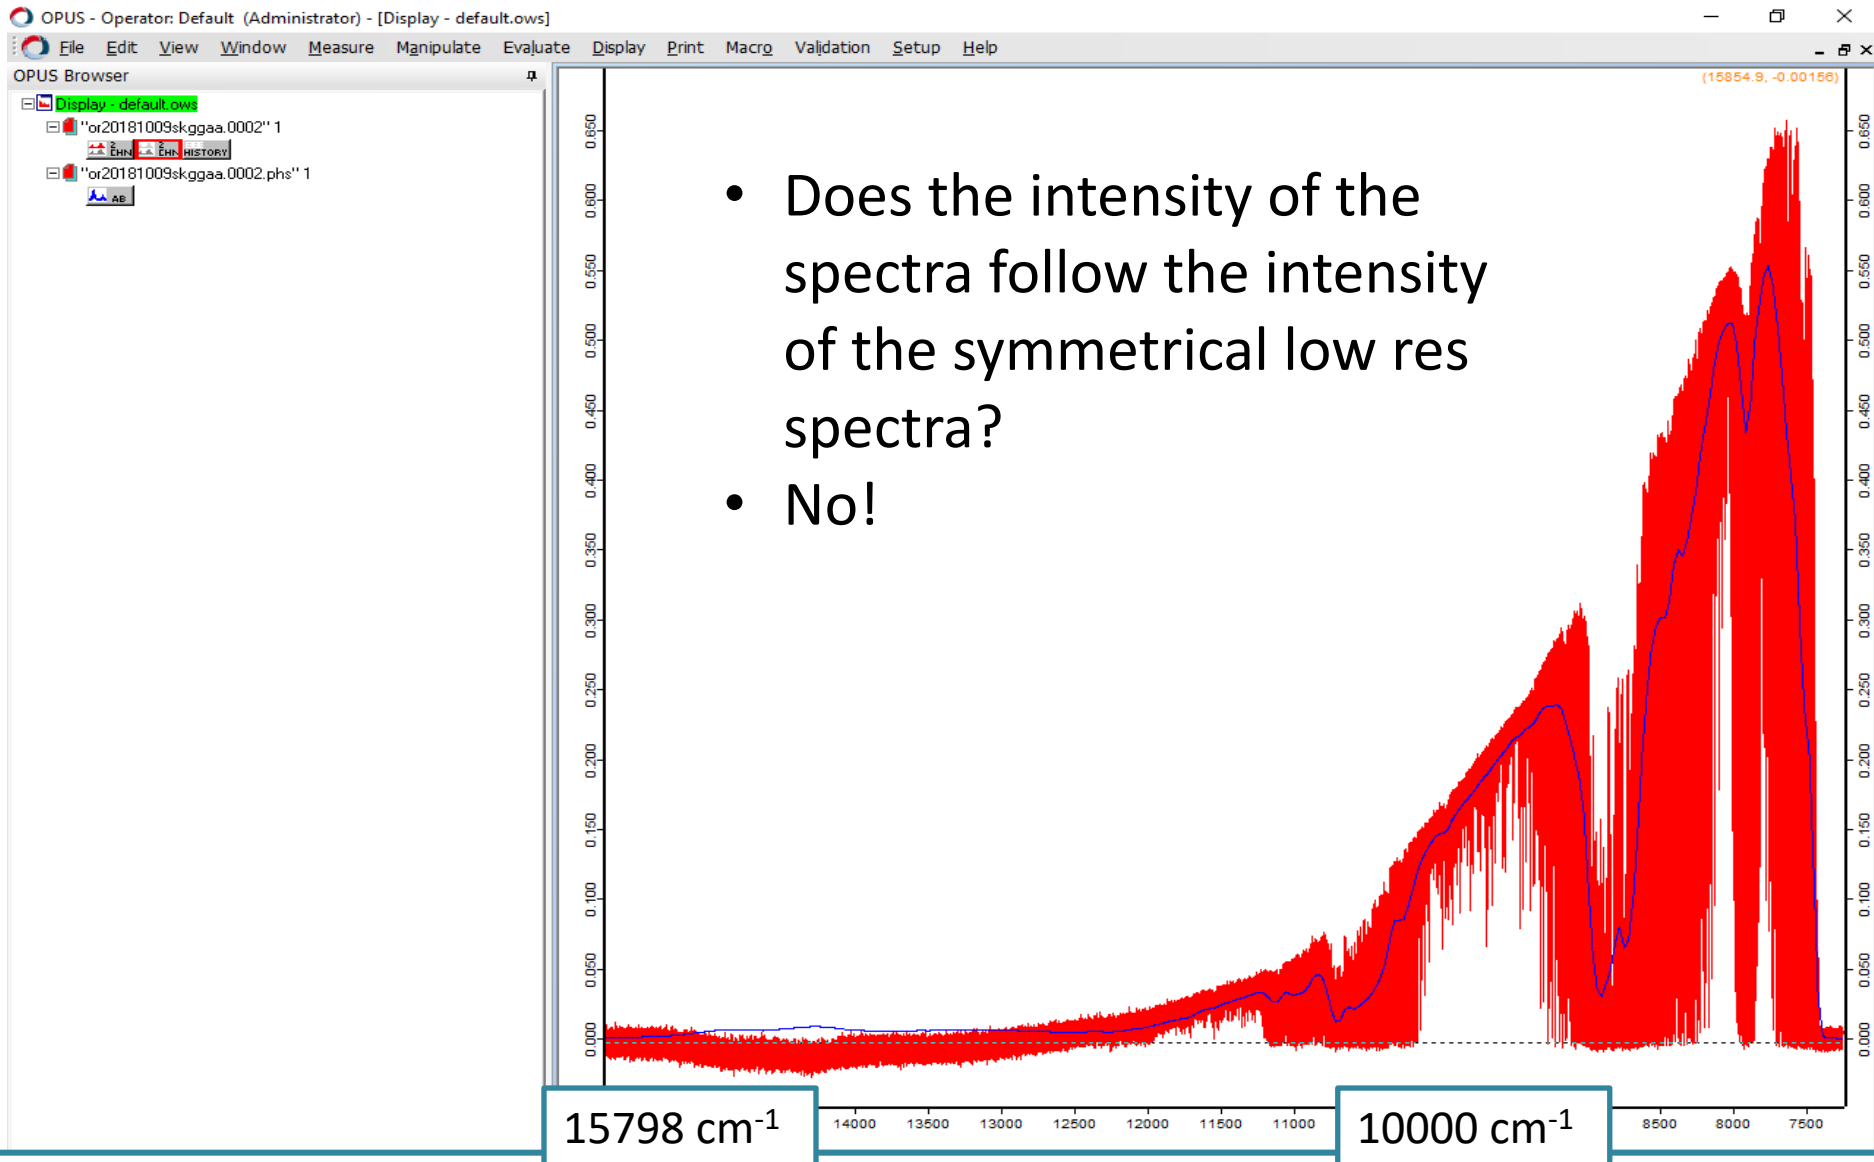

Tests with a more smooth interpolation

Ny Alesund Phase Interpolation tests

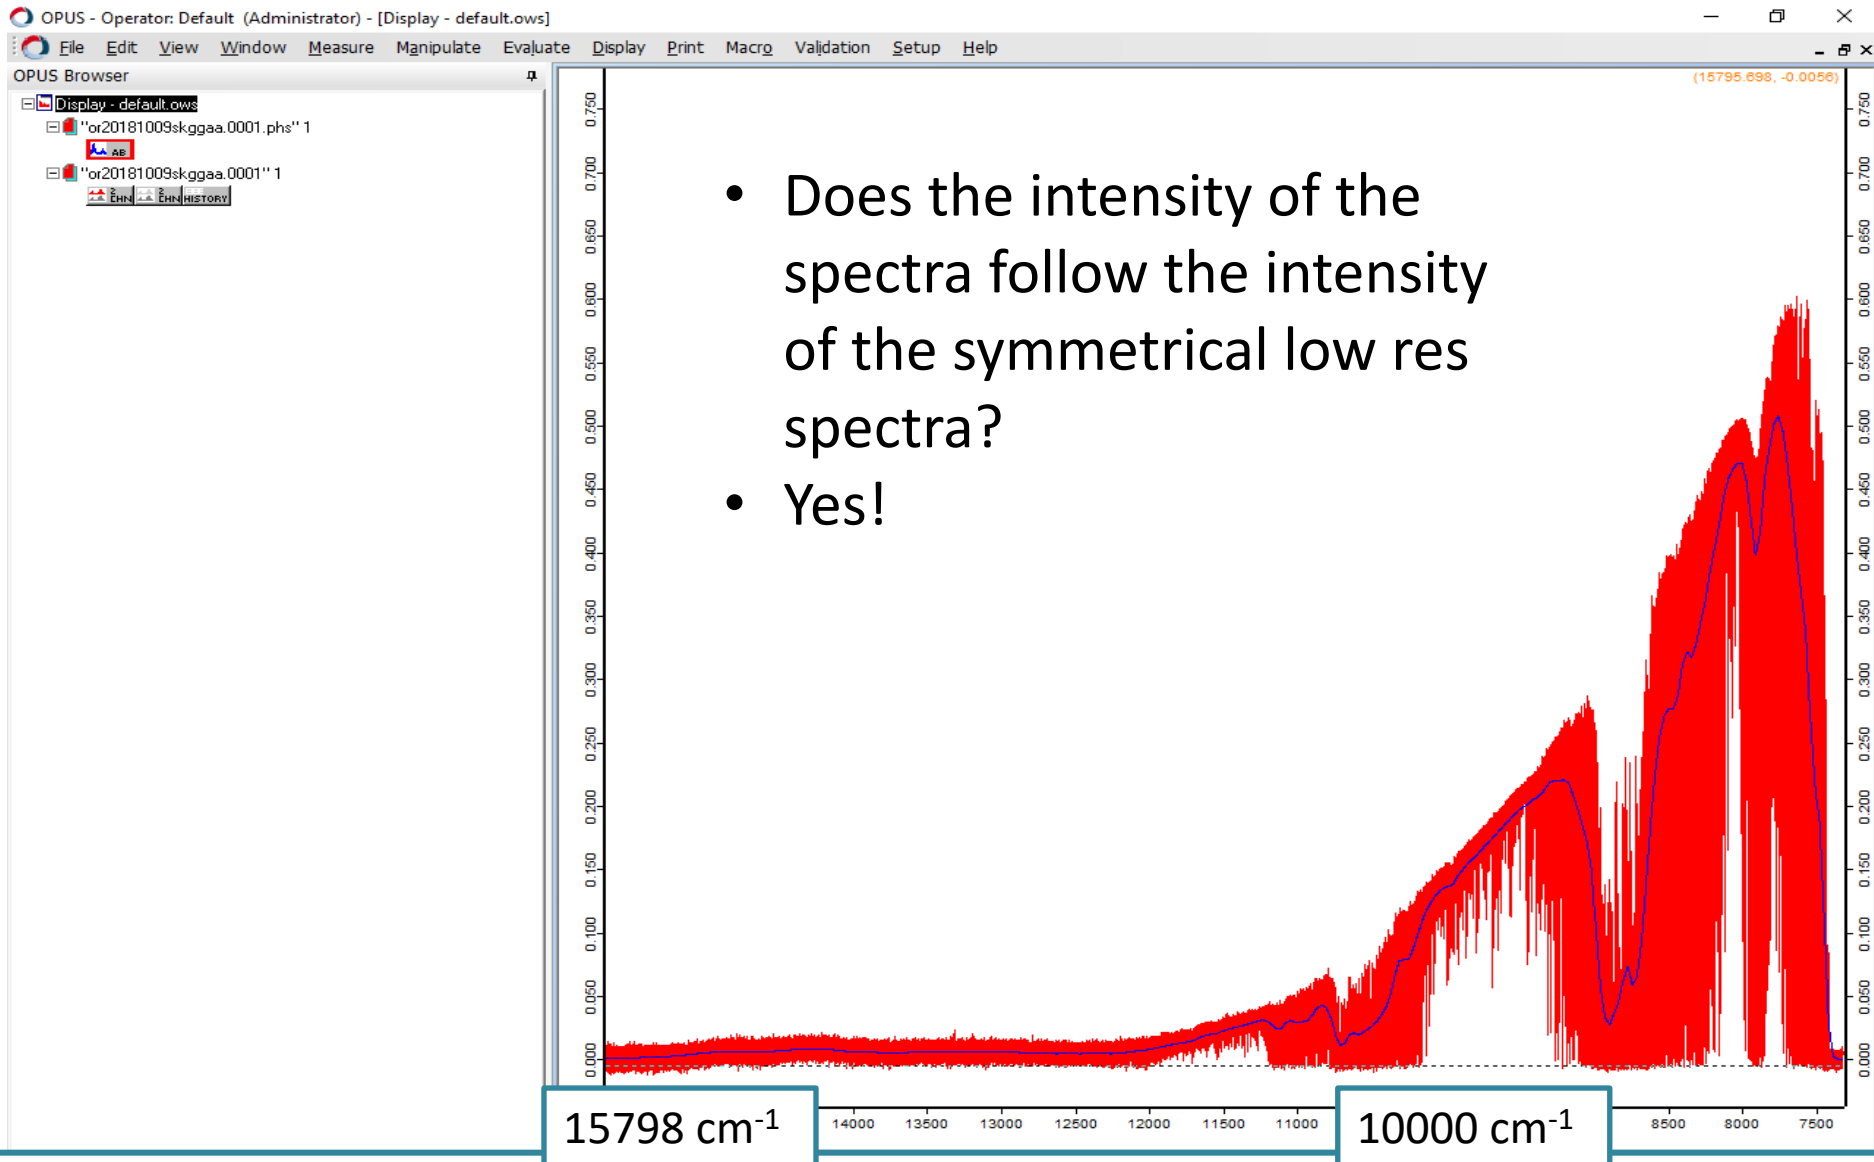

No strange intensities

Orleans InGaAS

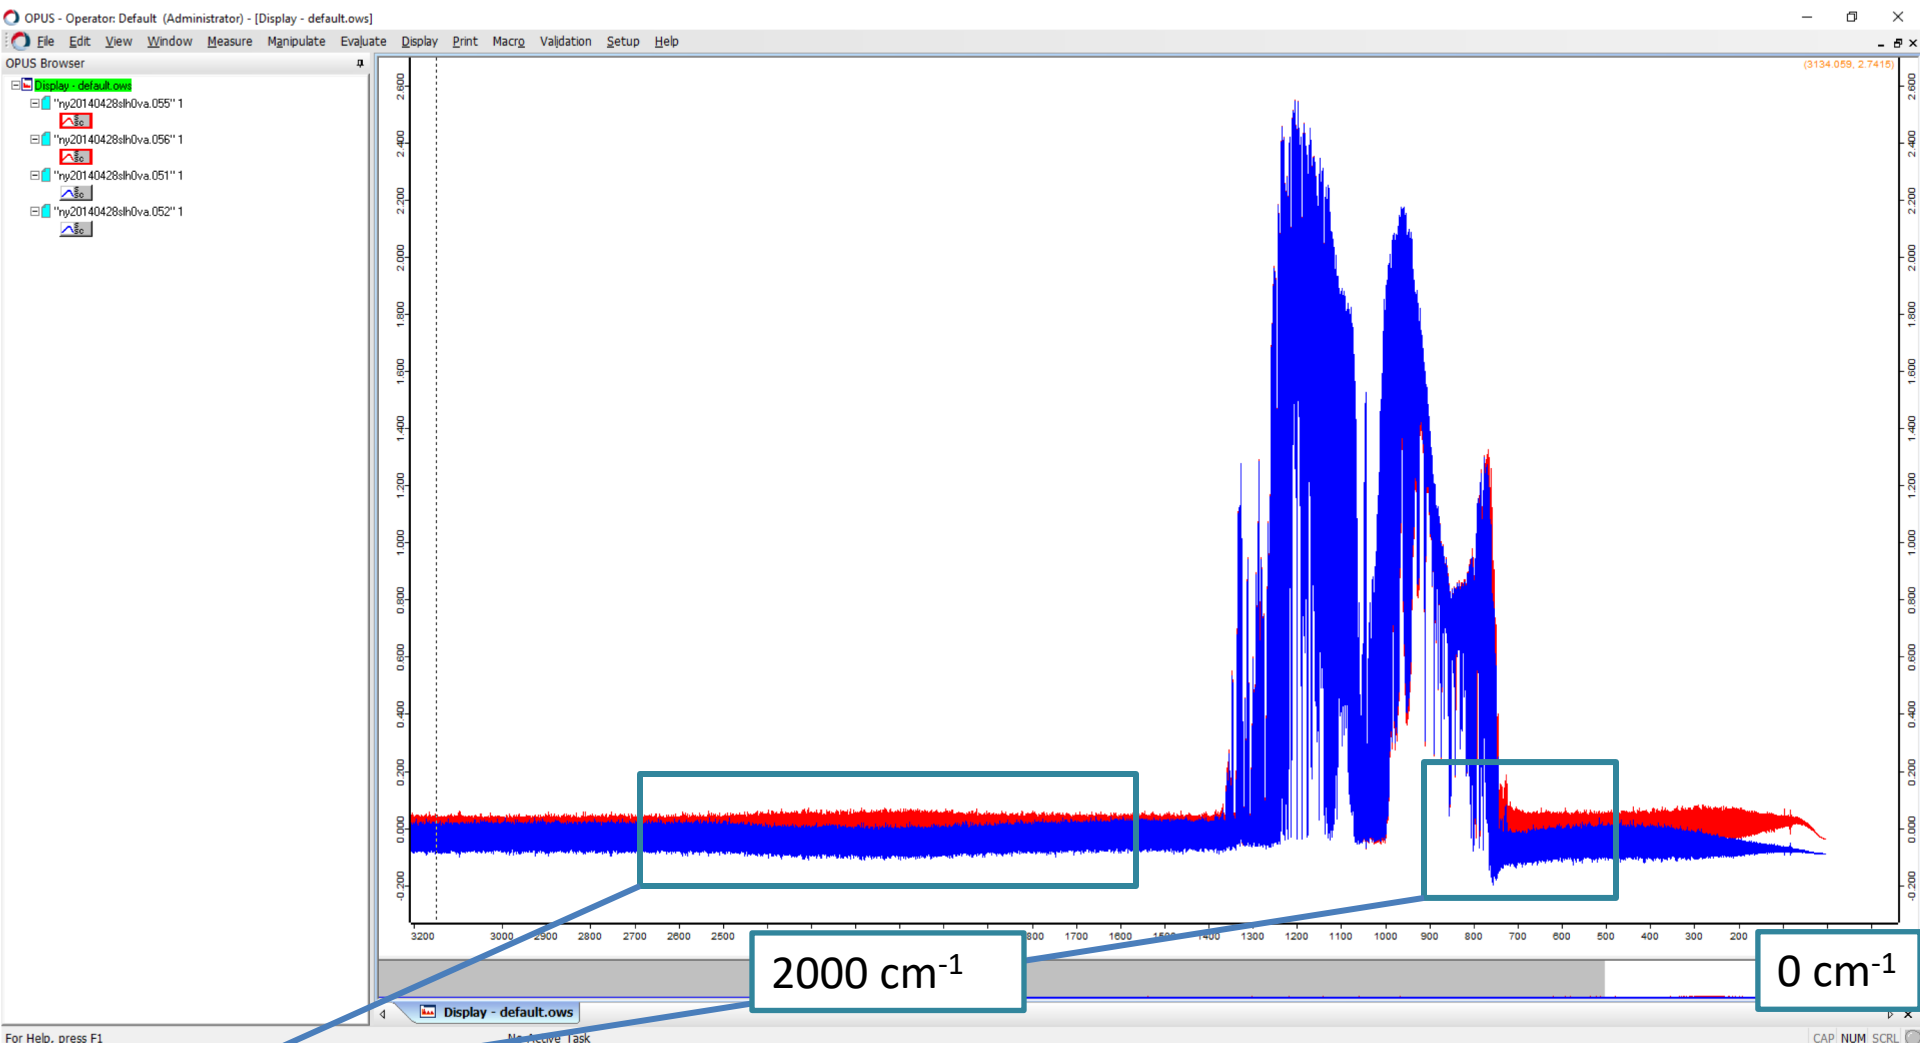

Comparison with intensity of symmetrical low res spectra PCT=0.02

Orleans InGaAS

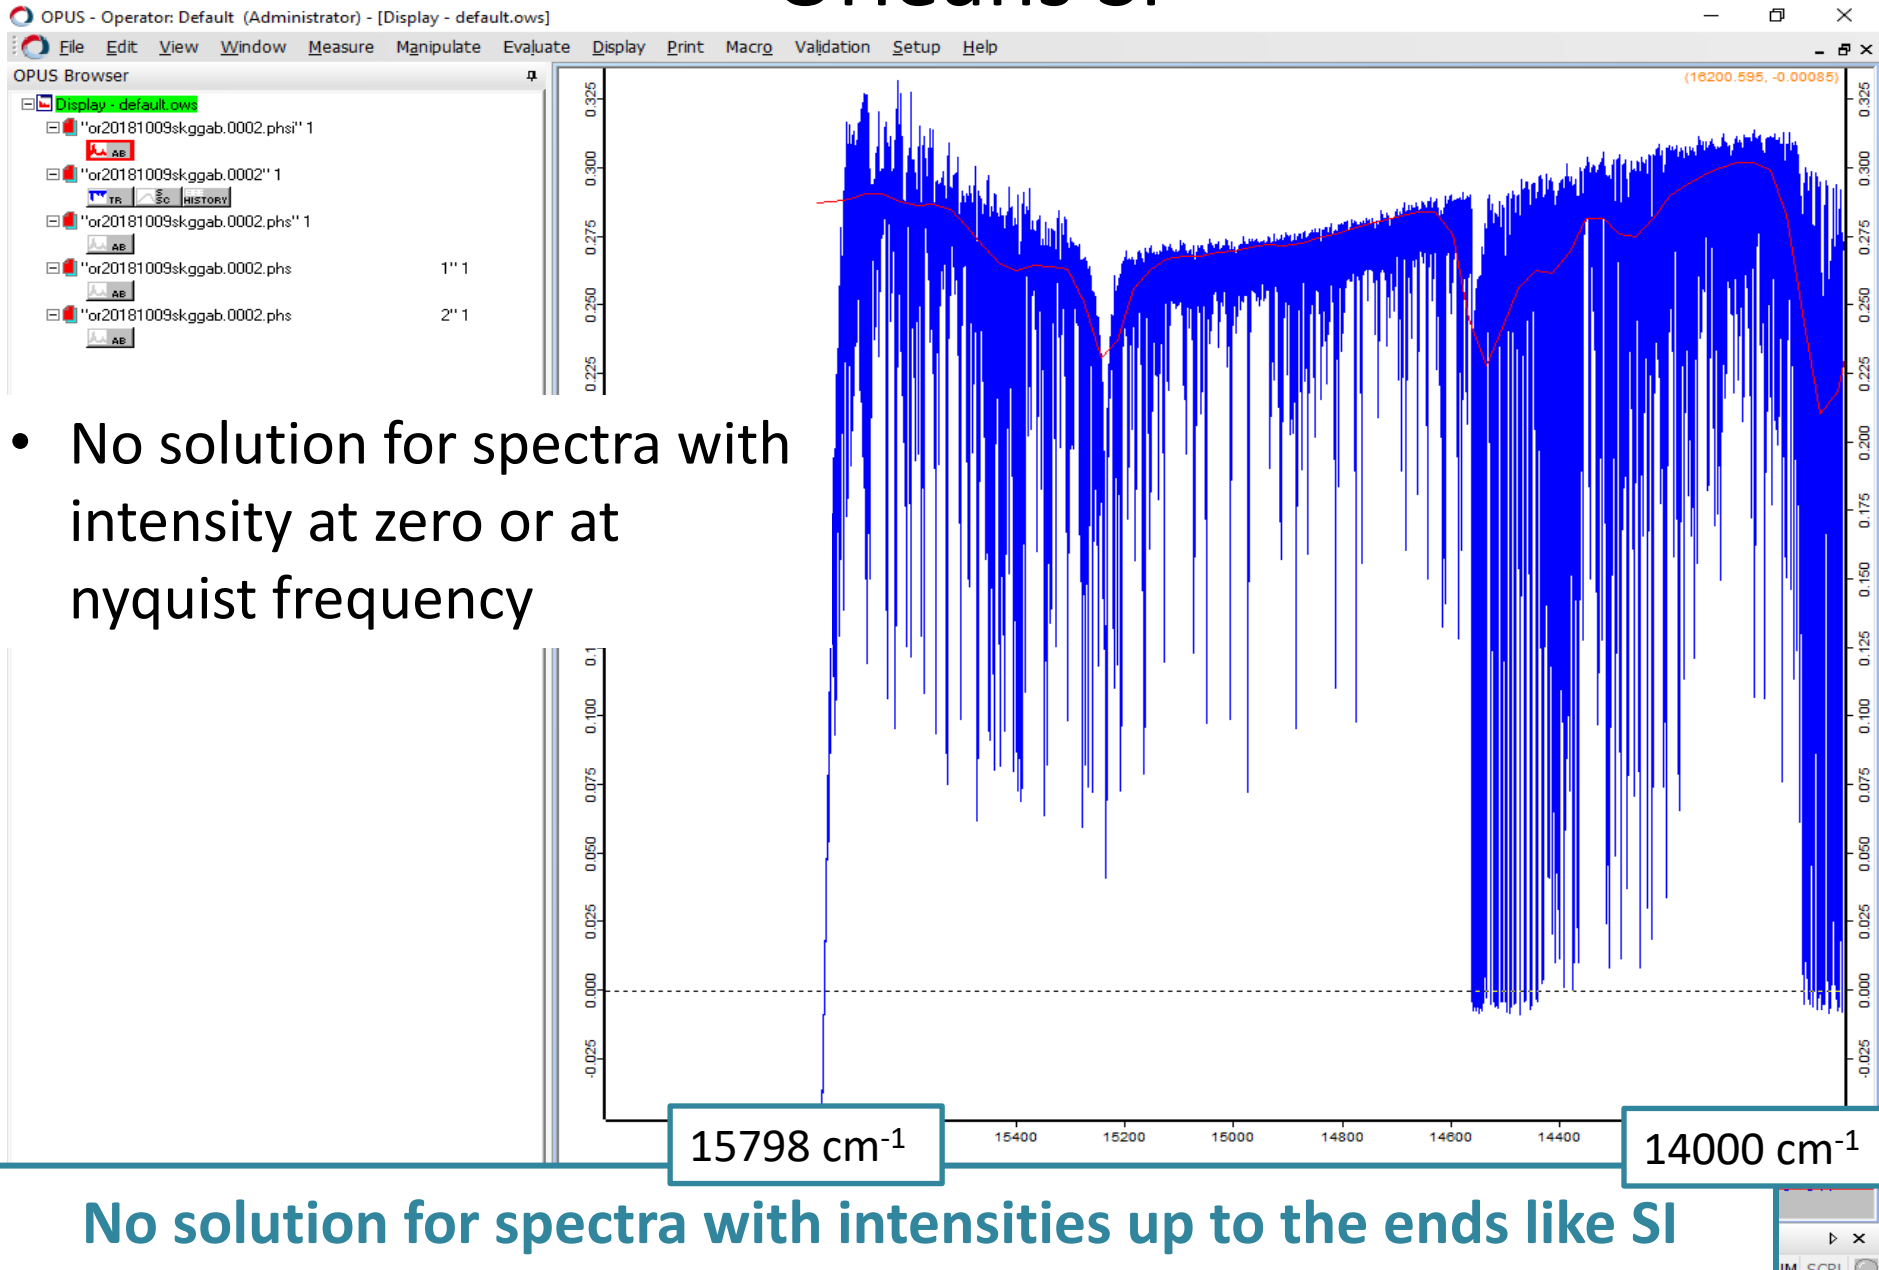

Comparison with intensity of symmetrical low res spectra PCT = 0.005

Ny Alesund Phase Interpolation tests

MCT negative intensities removed

Orleans Si

- No solution for spectra with intensity at zero or at nyquist frequency
