

GGG retrieval of EM27/SUN and intercomparisons against TCCON

TCCON Meeting
Spa, Belgium

Nasrin Mostafavi Pak

13 June 2023

EM27/SUNs for GHG Measurements in Toronto

Seven EM27/SUNs currently measuring in the GTA.

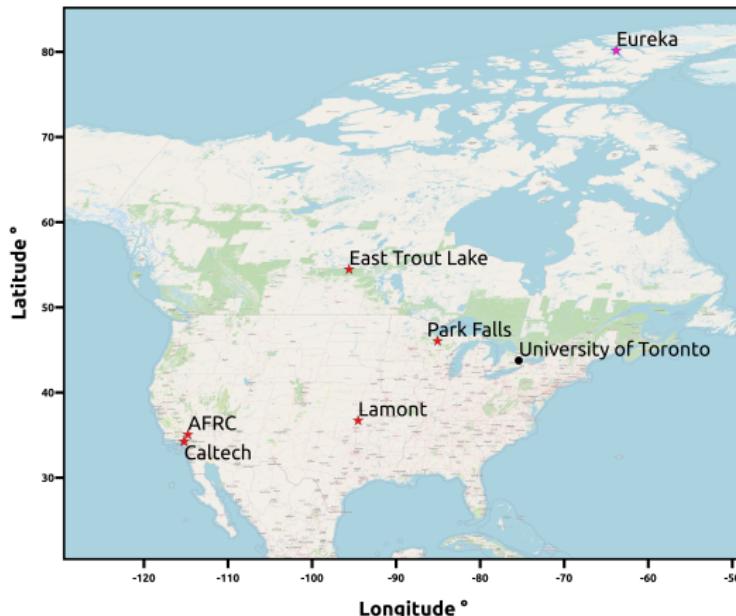

*Three have visited TCCON sites in North America.

University of Toronto	Environment Canada
ta* (since June 2017)	tc* (since Jun 2018)
tb* (since June 2017)	td (since Jun 2019)
	te (since Dec 2019)
	tf (since Sep 2021)
	tg (since Jun 2022)

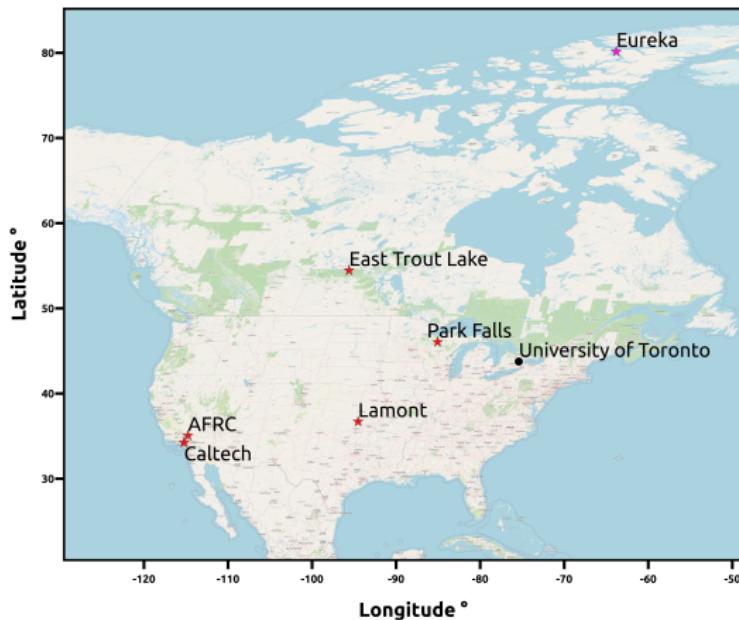

TCCON Road Trip

- ▶ Summer 2018 road trip campaign :
 - ▶ TCCON sites: Caltech (ci), AFRC (df), Lamont (oc), Park Falls (pa) and East Trout lake (et)
 - ▶ EM27/SUNs: Toronto (ta, tb, tc) and one EM27/SUN from Caltech (dn)
- ▶ Spring-Fall 2020: Eureka (eu), only of the instruments (tb)

TCCON Road Trip

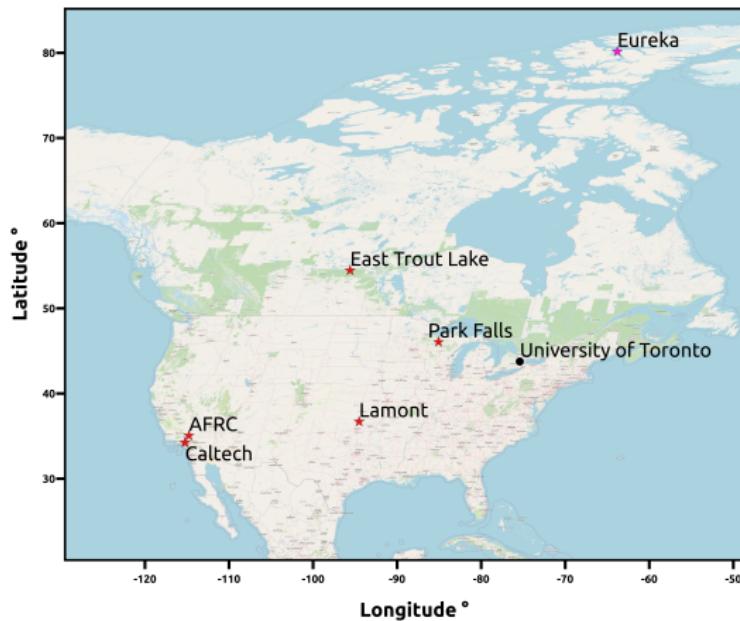

- ▶ Test the durability of EM27/SUNs when they are moving frequently
- ▶ Investigate the biases between the EM27/SUNs
- ▶ Investigate the biases between the EM27/SUNs and TCCON sites
- ▶ Indirectly Compare TCCON Stations to each other

TCCON Road Trip

In addition we planned for:

- ▶ AirCore launches at 3 sites: Dryden, Lamont and Park Falls

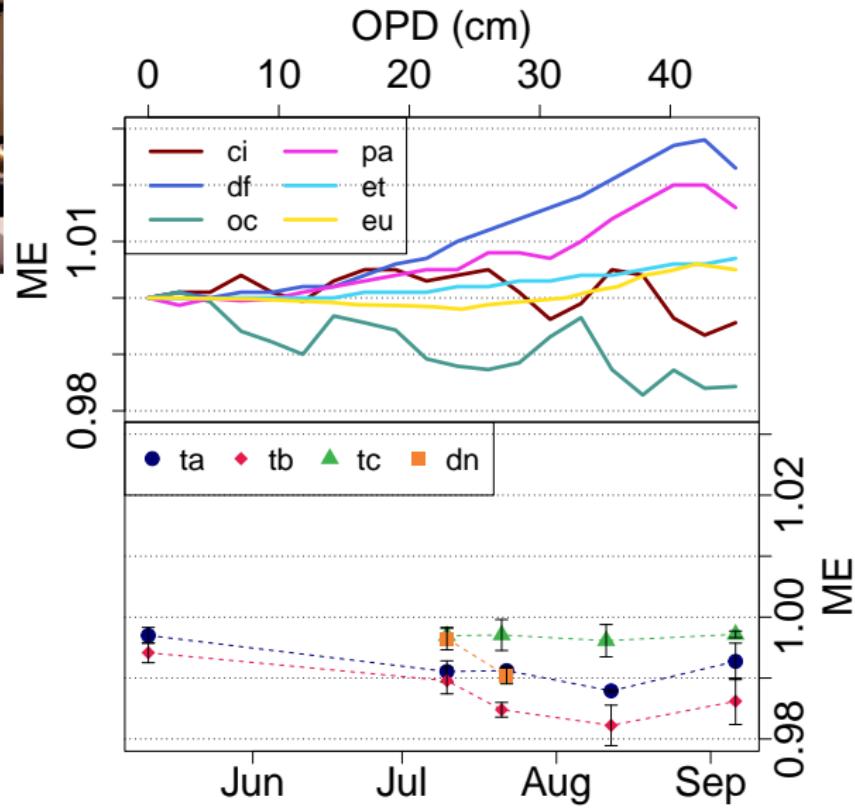

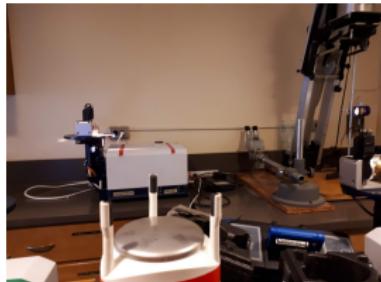

Overview of the trip

Site	Dates	# days	EM27/SUNs	# EM27/SUN ifgs	# TCCON ifgs	AirCore
Caltech	2018-07-06 – 2018-07-12	7	ta,tb,tc,dn	21356	1541	-
Dryden	2018-07-13 – 2018-07-19	7	ta,tb,tc,dn	16522	3775	6
Lamont	2018-07-21 – 2018-07-19	5	ta,tb,tc,dn	12942	872	9
Park Falls	2018-07-31 – 2018-08-07	4	(ta),tb,tc	3324	406	4
East Trout Lake	2018-08-09 – 2018-08-18	6	ta,tb,tc	10665	861	-
Eureka	2020-03-04 – 2020-09-25	61	tb	132279	5166	-

Retrieval Procedure

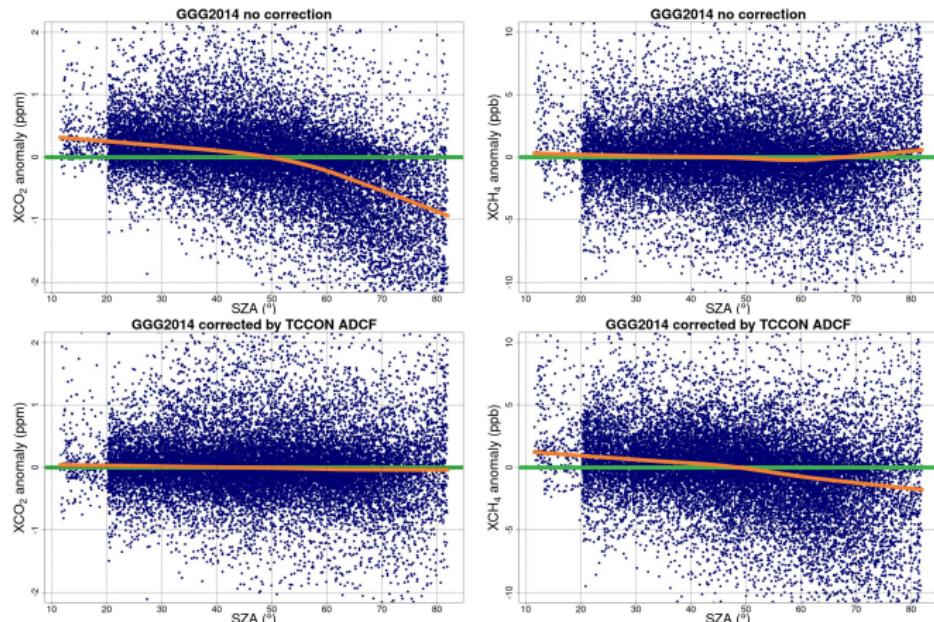

- ▶ Software: EGI/GGG2014 and EGI/GGG2020
- ▶ Data were processed with identical pressure data taken from TCCON and a priori profiles
- ▶ Revised Post-Processing steps for the EM27/SUNs:
 - ▶ Calculated Airmass Dependant Correction Factors (ADCFs)
→will go to EGI
 - ▶ Calculated an additive instrument-to-instrument bias →using ghost correction feature in GGG (will need to change the name at some point)
 - ▶ Calculated Airmass Inependant Correction Factors (AICFs) using coincident AirCore measurements →will go to EGI
- ▶ Added truncated low resolution 125HR spectra to match EM27/SUN resolution

ADCF calculation

GGG2014

	TCCON GGG2014 ADCF	EM27/SUN GGG2014 ADCF
XCO ₂	-0.0068	-0.0068
XCH ₄	0.0053	0
XCO	-0.0483	0

ADCF calculation

GGG2020

	TCCON GGG2020 ADCF	EM27/SUN GGG2020 ADCF
Xluft	0.00053	0.0027
XCO ₂	-	-0.0049
XCH ₄	-	-0.0045
XCO	0	0

Comparison of EM27/SUNs

GGG2014

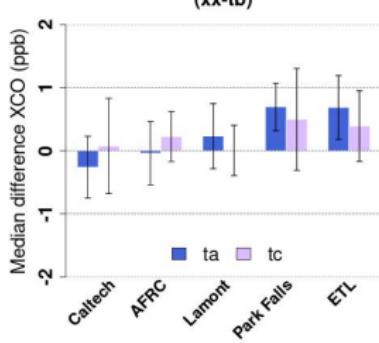

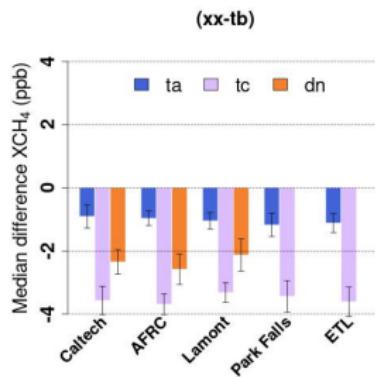

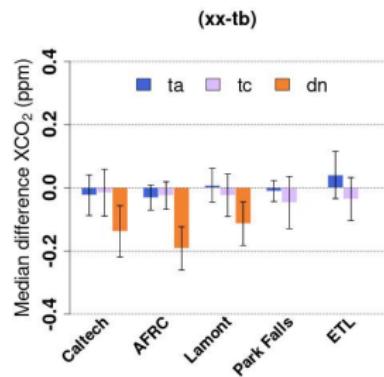

Consistent bias between the EM27/SUNs throughout the road trip.

Comparison of EM27/SUNs

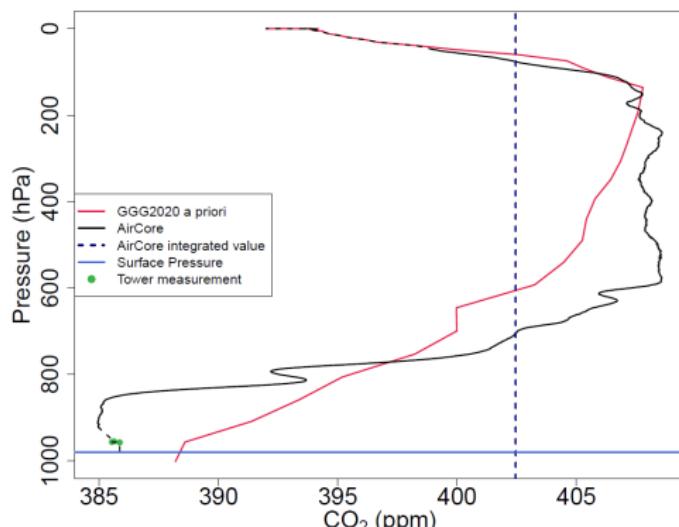

GGG2020

Consistent bias between the EM27/SUNs throughout the road trip.

Coincident AirCore Measurements

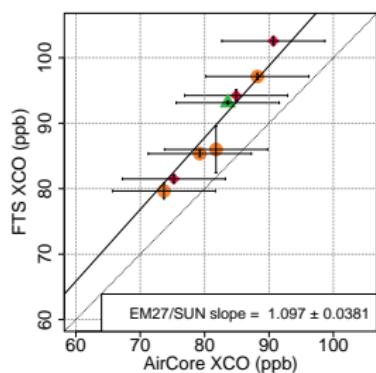

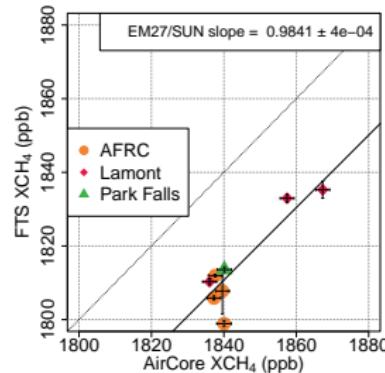

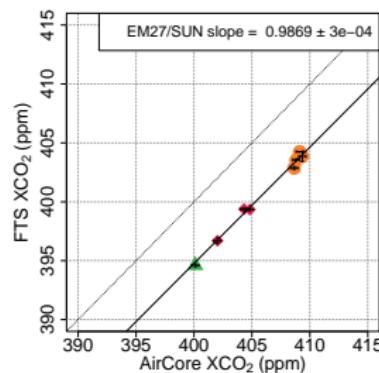

Site	Date	Launch time (UTC)	Number of launches	Collocated EM27/SUN(s)
AFRC remote site	2018-07-16	21:30	2	ta
	2018-07-17	14:00	1	ta
	2018-07-17	21:30	1	ta
	2018-07-18	18:00	2	ta
Lamont	2018-07-23	17:00	2	ta,tb,tc,dn
	2018-07-25	17:00	4	ta,tb,tc,dn
	2018-07-27	17:00	3	ta,tb,tc,dn
Park Falls	2018-07-31	17:00	2	tb,tc
	2018-08-03	17:00	2	-

AICF Calculation

GGG2014

	TCCON GGG2014 AICF	EM27/SUN GGG2014 AICF
XCO ₂	0.9898	0.9869
XCH ₄	0.9765	0.9840
XCO	1.0672	1.0965

AICF Calculation

GGG2020

	TCCON GGG2020 AICF	EM27/SUN GGG2020 AICF
XCO ₂	1.0101	1.0076
XCH ₄	1.0031	0.9999
XCO	1.0	1.0

Comparison of EM27/SUNs with TCCON XCO_2

GGG2014

Maximum difference:

High resolution= 1.33 ppm

Description

The EM27/SUN GGG Interferogram processing suite (EGI) is a collection of software tools to simplify processing data collected using EM27/SUN instruments through GGG. Complete processing is simplified down to a one-line command or can even be setup with a cronjob to run automatically e.g., overnight. EGI completes steps of matching meteorological, and location data, and obtaining a priori files automatically e.g., EGI2020 also includes tools to create basic plots for quick QC purposes. EM27/SUN instruments are commercial, portable, solar-viewing FT-IR spectrometers (manufactured by Bruker). GGG is open-source software used to FFT the interferograms to spectra, and then fit the spectra to obtain column averaged abundances of CO₂, CH₄, H₂O, CO, and N₂O. GGG is used for the TCCON (<https://tccon-wiki.caltech.edu/>).

Measurement locations since July 2019

Measurement locations since July 2019

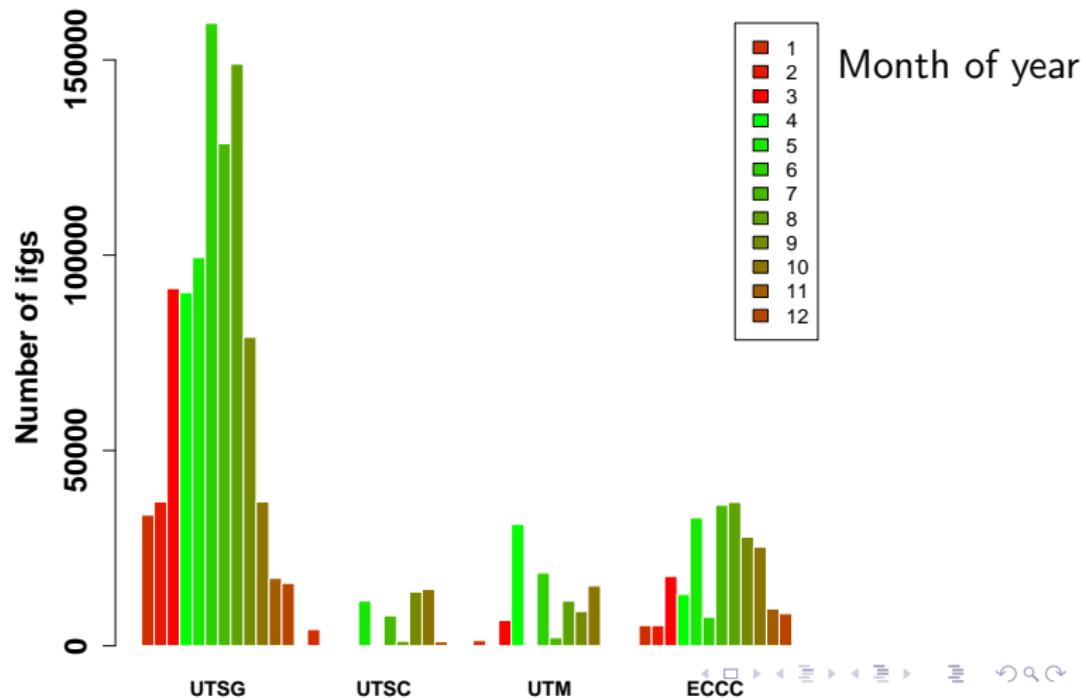

Data availability

More data is available from the Downtown (UTSG) and Downsview (ECCC) that were automated before COVID-19 lockdown.

Mississauga (UTM) and Scarborough (UTSC) are now automated.

EM27/SUN data summary

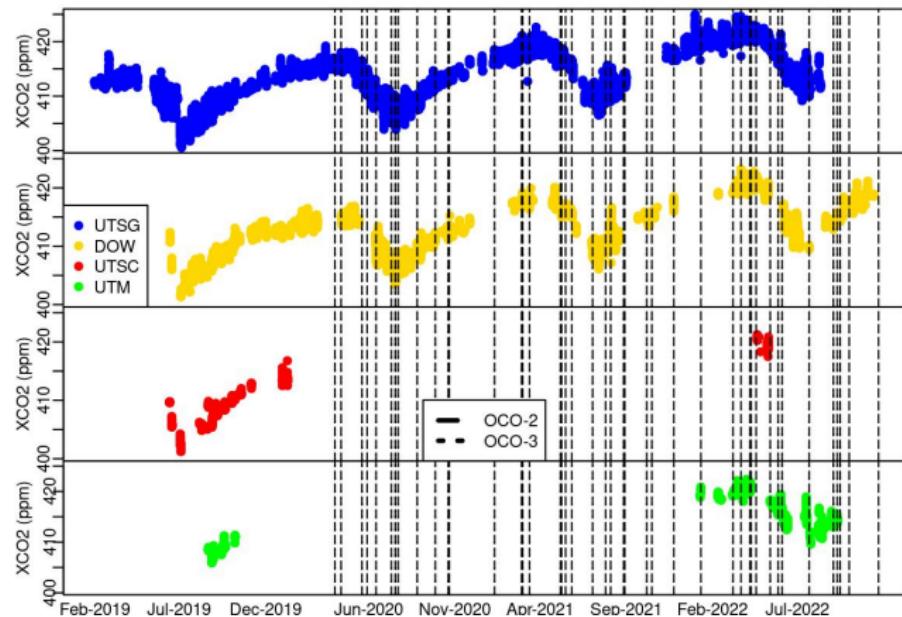

Data Availability

XCO₂

10 minute average precision = 0.5 ppm

Maximum site to site relative enhancement \approx 6 ppm

75th percentile site to site relative enhancement \approx 0.7 ppm

Description ! Column-averaged dry-air mole fractions (DMF) of trace gases CO₂, CH₄ and CO were collected using a Bruker Optics EM27/SUN Fourier Transform Spectrometer (FTS) at the University of Toronto, St George Campus. The data were processed using GGG2020. (2023-05-03)

Average OCO-3 (within site grid box) vs EM27/SUN

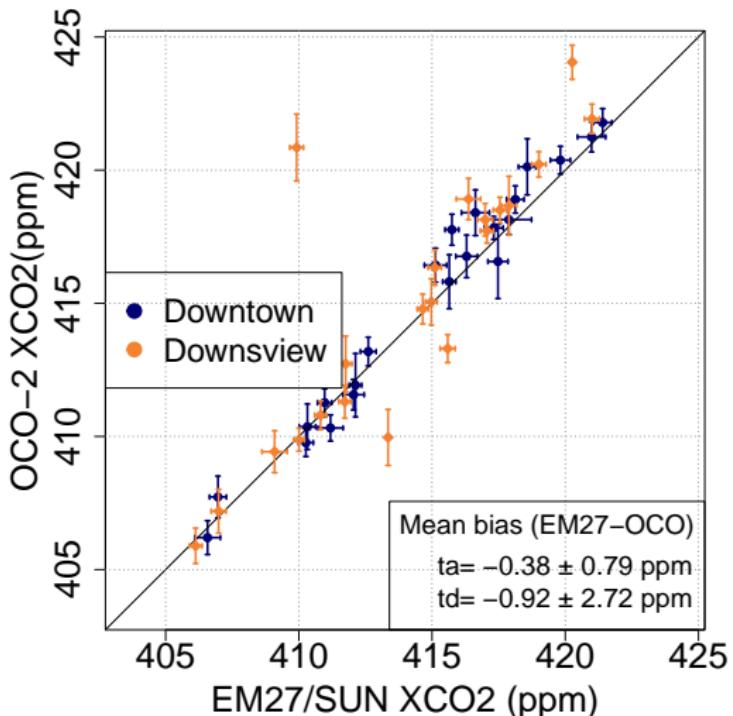

EM27/SUN values: Averaged over \pm half an hour from target time

OCO-3 values: Average inside site specific grid box

Average OCO-2 vs EM27/SUN

EM27/SUN values: Averaged over \pm half an hour from target time
OCO-2 values: Average inside site specific grid box

Summary

- ▶ We have developed post processing steps specific to EM27/SUNs to be followed by all GGG users - Implemented into EGI2020
- ▶ We have shown that EM27/SUNs are stable enough when moving frequently
- ▶ GGG2014: Comparisons between EM27/SUN and TCCON retrievals show some variations from site to site which improves using the low resolution spectra
- ▶ GGG2020: There are some improvements in site-to-site biases except for XCO
- ▶ We see some temperature dependence in Xluft which could cause additional biases in Eureka
- ▶ More investigation needs to be performed on GGG2020 low resolution TCCON retrievals
- ▶ Long term measurements in Toronto and satellite validation, more measurement stations have been set up in last year, all GGG2020 public files will be available on Borealis
